- 5) 1991 Invitations pending from Vermont, New York, Nebraska, and South Carolina

Conference Purpose

Editor's note: the following statement from the Proceeding of the 3rd EWDCC, as true today as it was several years ago, represents a succinct summary of the reasons behind convening the EWDCC. It will remain so well into the future.

Conflicts between humans and wildlife have continued to increase with human population growth and dispersion into rural habitats, with intensified land use of all types, and with greater use of natural landscapes in the urban/suburban environment. Wildlife problems are of major concern in numerous agricultural, forestry, and residential situations. Damage involves loss of resources, loss of property, and sometimes loss of life. Continued support for maintenance of many wildlife populations is dependent on our ability to address these problems.

Wildlife damage control is an increasingly important discipline within the profession of wildlife management. The discipline has been developing rapidly as a science and in complexity. There is a need to periodically bring research, extension, and agency personnel together to discuss recent advances in technology, problem definition, and policy. Through this type of interchange new and better damage control strategies are formulated, priority areas for research are identified, and new information is disseminated. The Eastern Wildlife Damage Control Conference continues to be a major means for improving communication within the discipline.

Proceedings

The proceedings were reproduced from camera-ready copy provided by the authors. Format instructions were provided, but variations in type and table and figure presentation were inevitable. The quality and content of each paper are the author's responsibility. Typographical errors that may have been introduced to papers that had to be reformatted by the editorial staff are the responsibility of the editorial staff. In a few instances, only abstracts or extended abstracts are presented to allow the authors freedom of publication in professional journals. The paper by Jennings et al. on alligators in Florida was graciously submitted for inclusion even though the authors were unable to attend the conference. The panel discussions on urban Canada goose and urban deer management were highly productive but no attempt was made to transcribe the content. The editorial staff is very appreciative of the effort made by the authors to submit papers on schedule.

Proceedings availability

Copies of the 4th EWDCC proceedings are available from the USDA/APHIS/ADC office in Sun Prairie, WI (see co-chair list) for \$20 each, postage included or from future conference chairs while supplies last. As of December, 1989, proceedings from the previous 3 EWDCC's were out of print.

Trade names used or vendors mentioned in the Proceedings are used for convenience only and to represent attendance at the conference. No endorsements of products or vendors is intended nor is criticism of unnamed products implied.
